YEARS OF
EXCELLENCE

About Us

DiGiCOR was founded in 1997 with the goal of becoming a major player in the Australian and New Zealand niche ICT Infrastructure market.

Our focus is on providing server, data storage, workstation, networking, edge computing, and IoT solutions.

From designing IT infrastructure to deployment of the final solution, we manage the entire journey for our customers. Traditionally, we were best known for Supermicro solutions, but in recent years we have expanded our partnership to include servers, storage, and workstations from Intel, Seagate, DDN, Western Digital, Chenbro, iXSystems and ASUS, all of which can be configured and priced on our website.

Portfolio

IoT and Embedded

DiGiCOR supplies and supports high-quality embedded and IoT solutions. These systems are deployed at the “edge” of a network when compute resources are needed to derive maximum value from remote data, boosting overall productivity and network performance.

Workstation

DiGiCOR workstations are optimised for businesses that work in graphic design, video editing, VFX, or the creative arts. We design and build powerful workstations that produce superior quality results in the least possible time.

Networking

DiGiCOR partners with the leaders in wired and wireless networking to provide you with networking solutions.

Server

In today’s complex and data-driven world, servers are the backbone of a modern business. DiGiCOR has your server needs covered whether you are a start-up or a large enterprise with multiple data centres in Australia and New Zealand.

Storage

DiGiCOR offers a comprehensive, reliable, and highly scalable range of data storage and backup solutions, designed for the highest levels of performance for your business.

Licensing

From basic Microsoft office licenses to complex hypervisor licensing, you can rely on DiGiCOR to provide you based on your needs.

Our Partners

DiGiCOR is proud to partner with global IT corporations to assist you by providing the best customised solutions:

Server	   
Storage

How can we help?

System Design

We can customise the systems needed that are compatible with the software and your requirements.

Configuration

Our system configurator helps customers in designing a tailored computing solution.

Installation

Ensure all components of the system are working together seamlessly.

Maintenance & Support

Provide ongoing maintenance and 24/7 support services to ensure that the system is always up-to-date and running smoothly.

Quality Assurance

We conduct rigorous testing, ensuring compliance with industry standards, and soliciting feedback from end-users.

Cutting-edge Technology

Partnering with industry leaders, we provide the most advanced and innovative devices for your business' needs.

Servers

The Backbone of Modern Businesses

In today's dynamic and data-driven business landscape, servers stand as the indispensable backbone of modern enterprises.

Whether you're a start-up or a well-established corporate giant, the ability to harness the power of data efficiently and securely is paramount to success. This is where DiGiCOR steps in, offering tailor-made server solutions designed to meet the unique demands of businesses of all sizes.

DiGiCOR specialise in crafting custom solutions tailored to your organisation's needs. Whether you require robust storage capabilities, enhanced processing power, or seamless scalability, our team of experts will work closely with you to design a server infrastructure that aligns perfectly with your objectives.

Delivering Exceptional Performance, Unparalleled Reliability, and Outstanding Value

Our award-winning solutions are deployed every day by IT departments in many of Australian and New Zealand's largest organisations.

Setting the standard for quality, reliability, and performance, our range of systems provides businesses with the superiority and the dependability needed. Every rackmount and data storage server is custom configured and built to order, ensuring our customers only get the most up-to-date systems.

In addition to our hardware, we are also able to provide you with a range of software options. Our expert team are able to provide you with a free consultation to help you choose the right software for your needs and configure it to work seamlessly with your hardware.

Processors

To maximise performance, scalability, compatibility, energy efficiency, and reliability, our servers are compatible with following processors:

AMD EPYC

AMD RYZEN

Intel Xeon E

Intel Xeon Scalable

Featured Brands

ASUS offers a broad array of server solutions, including rack servers, tower servers, GPU servers, high-density servers, and server motherboards.

Our flexible range of systems supports a variety of platforms and in different form factors. Designed, assembled, tested, and supported by our team of trained technicians.

HPE Servers are designed to deliver powerful, reliable, and scalable computing solutions for businesses of all sizes.

The most comprehensive line of Supermicro Servers, the premier provider of advanced Server Building Block Solutions.

Storage

Scalable and Flexible Data Archiving Solutions

In today's digital era, efficient storage solutions are indispensable for individuals and businesses alike.

As the volume of data generated continues to soar, the demand for robust, scalable, and secure storage systems has become more critical than ever. From traditional hard drives and network-attached storage (NAS) to cutting-edge cloud-based and hybrid models, the landscape of storage technology is rapidly evolving to meet diverse needs.

These solutions not only provide ample space for data retention but also offer enhanced accessibility, data protection, and cost efficiency. Understanding the array of storage options available is essential for optimising data management and ensuring seamless operation in an increasingly data-driven world.

Featured Brands

DiGiCOR offers a comprehensive, reliable, and highly scalable range of data storage and backup solutions, designed for the highest levels of performance for your business.

Hitachi Vantara offers a wide range of data storage solutions designed to meet the diverse needs of modern enterprises. Their portfolio includes high-performance storage arrays, hybrid storage systems, and software-defined storage solutions.

A prominent global provider of network-attached storage solutions and network video recorders. QNAP specialises in the development of feature-rich NAS systems designed for storage management, backup, virtualisation, multimedia, and business applications.

The Seagate Storage System is the highest-capacity, most efficient solution in the datasphere. Seagate delivers the scalable capacity you need to harness the power of your data.

Supermicro's top-loading, capacity-maximised Super Storage is ideal to meet growing capacity challenges. Through innovations in maximised hot-swappable storage bays and tiered Storage and I/O Expandability

A leader in Open Source storage and server technology through their expertise in hardware designs and projects such as FreeNAS and TrueNAS, the number one Open Source storage operating system.

Cost Effective Proven Solutions

High Density Enterprise Optimised

High Density Full Serviceability

Full-range JBOD Series

- 2U~4U form factor available
- 12/16/24/44/72 Hot-swap 2.5" or 3.5" SAS3/SATA3 drive bays
- Front and rear access, front only access
- IPMI port and system monitoring

Top Loading 45/60/90

- 45/60/90 Hot-swap 3.5" SAS3/SATA3 bays
- Top loading drive bay access
- Flexible HDD Zoning
- Individual HDD power cycling
- 25.9"/30.2"/35.7" depth

Top Loading 60/90

- 60/90 Hot-swap 3.5" SAS3/SATA3 bays
- Top loading "drawer" pull-out design
- Passive BPN design, eliminates single point of failure
- No cable-management required
- Complete field-replaceable units available

Workstations

Unleash Creativity and Efficiency with Tailored Workstations

Produce Superior Quality Results in the Least Possible Time

Empower your creative team with tailored workstations equipped with powerful graphics rendering capabilities, specifically designed to tackle demanding workloads such as designing, 3D rendering, image processing, video editing, and VFX effects.

Our workstations are designed to deliver powerful performance and versatile storage configurations in a small footprint for SMBs to large institutions. Get the reliability you expect, delivered in a package optimised for office environments.

Workstations are built for the most specialised and power-intensive workflows, so you can cut through your toughest jobs. Our systems are designed to provide extreme performance for the most-demanding professional workflows.

Processors

To maximise performance, scalability, compatibility, energy efficiency, and reliability, our workstation are compatible with following processors:

AMD Threadripper

Intel Xeon Scalable

Intel Xeon W

Intel Core i

Featured Brands

DiGiCOR Workstations are optimised for businesses that work in graphic design, video editing, VFX, or the creative arts. We design and build powerful workstations able to produce superior quality results in the least possible time.

HP workstations, particularly the Z series, are designed for high-performance tasks such as AI development, 3D modeling, and data analysis. They feature advanced processors, high-end graphics, and large memory configurations to handle the most demanding professional workloads.

Supermicro SuperWorkstations are optimally built with powerful GPUs for high-performance computing power within a simple, single workstation. Stay ahead of your business objectives with SuperWorkstations.

4th/5th Gen Intel Xeon Scalable Workstations

Deliver Uncompromising Performance and Stability, Catering to the Diverse Needs of Creative Professionals and Design Engineers

IoT and Embedded

Bring Mission Critical Operations to Every Day Devices

IoT and Embedded systems are transforming the way we interact with the world around us.

More devices are becoming connected, creating the possibilities for innovation and improved performance. These systems are deployed at the "edge" of a network where compute resources are needed to derive maximum value from remote data, boosting overall productivity and network performance.

Empowering Businesses with the Power of IoT and Embedded Devices

From real-time processing to automation of tasks, IoT can help businesses in various ways. These systems facilitate seamless connectivity and communication across various devices and platforms, fostering collaboration and enhancing productivity.

Gain real-time insights and data-driven intelligence, facilitating informed decision-making and proactive management with IoT devices.

IoT and embedded solutions empower businesses to automate routine tasks, freeing up valuable time and resources for strategic initiatives, such as automated inventory management systems.

DiGiCOR offers a broad range of IoT and embedded systems that can be customised to your specific needs, which include:

- GPU and Edge AI
- Industrial PCs and Fanless PCs
- Network Appliances and Edge Servers
- Robotics
- Panel PC
- Medically Certified Products
- Smart Manufacturing
- Rugged SFF Platforms and Servers

Featured Brands

ADLINK offers solutions that enable real-time data processing and intelligent decision-making at the edge, enhancing operational efficiency and reducing latency.

A sub-brand of ASUS dedicated to the creation of incredible solutions in the fields of AI and IoT.

Supermicro offers a range of IoT and edge computing solutions designed to deliver high-performance computing and AI capabilities at the edge.

Deep Learning Accelerator, Platform, & Server

DLAP-211-Orin Series

Powered by NVIDIA® Jetson Orin™ module, this is designed to deliver unparalleled high-performance computing capabilities.

DLAP-211-JT2

Powered by Jetson TX2 NX™ Edge AI Inference Platform to expedite AI deployment.

DLAP-211-JNX

Leverages Jetson Xavier™ NX to deliver artificial intelligence (AI) at the edge, accelerating deep learning workloads for object detection, recognition, and classification.

DLAP-211-Nano

Powered by NVIDIA® Jetson Nano™, this edge [platform enables AI at the edge with exceptional performance and convenience while keeping power consumption to a minimum.

DLAP-401-Xavier

Powered by NVIDIA® Jetson AGX Orin™ this is a high-performance platform designed for deployment of AI-powered systems at the edge, providing the computing power needed for demanding AI applications.

DLAP-411-Orin

Powered by NVIDIA® Jetson AGX Orin™ this is a high-performance platform designed for deployment of AI-powered systems at the edge, providing the computing power needed for demanding AI applications.

RQX-580/58G

A ROS 2 enabled robotic controller powered by the NVIDIA® Jetson AGX Xavier module, features an integrated NVIDIA Volta GPU and dual deep learning accelerators and a wide variety of interfaces

RQX-59 Series

Powered by the NVIDIA® Jetson AGX Orin™ module, the RQX-59 Series ensures seamless integration into robotic and autonomous driving applications.

Expandable Fanless Embedded Computers

MVP-6200 Series

This Compact Modular Industrial Computers is powered by 14/13/12th Gen Intel® Core™ i9/i7/i5/i3 and Celeron Processors. This computers can also incorporate GPU cards in a rugged package suitable for AI inferencing at the Edge.

MVP-6100 Series

Value Family 9th Generation Intel® Xeon®/Core™ i7/i5/i3 & 8th Gen Celeron® Processor-based expandable computer

Industrial PCs, Fanless Embedded PCs - IPC Systems

DLAP-4000 Series

Embedded System supporting FHFL dual-width PEG slot with 8th/9th Generation Intel® Core™ i7/i5/i3 in LGA1151 Socket

DLAP-8000 Series

9th Gen Intel® Xeon®, Core™ i7/i5/i3-Based Compact Industrial GPU Workstation

Integrated Fanless Embedded Computers

MVP-5200 Series

This Compact Modular Industrial Computers is powered by 14/13/12th Gen Intel® Core™ i9/i7/i5/i3 and Celeron Processors. this computers can also incorporate GPU cards in a rugged package suitable for AI inferencing at the Edge.

MXE-5600 Series

9th Gen Intel® Xeon®, Core™ i7/i3 and 8th Gen Intel® Core™ i5 Processor-Based Embedded Fanless Computer

GPU Solution: MXM Module

EGX-MXM-A500
 Embedded MXM GPU Module with Embedded NVIDIA RTX™ A500

EGX-MXM-A1000
 Embedded MXM GPU Module with Embedded NVIDIA RTX™ A500

EGX-MXM-A2000
 Embedded MXM GPU Module with NVIDIA RTX™ A2000

EGX-MXM-A4500
 Embedded MXM GPU Module with Embedded NVIDIA RTX™ A4500

APPLICATIONS

- Used for various applications that require real-time ray tracing, AI-accelerated graphics, and energy-efficient AI inference accelerations such as medical imaging, defect inspection, autonomous driving, robotics, smart cities, and gaming
- Widely used in manufacturing, healthcare, retail, transport, and hospitality solutions as it enables easy integration into various embedded systems

Edge Computing Solution: BOX PC

MVP-5200 Series
 This Compact Modular Industrial Computers is powered by 14/13/12th Gen Intel® Core™ i9/i7/i5/i3 and Celeron Processors. this computers can also incorporate GPU cards in a rugged package suitable for AI inferencing at the Edge.

Edge AI GPU Computers

PE400D

Intel 10th Gen. Core-I and Xeon Processors
Intelligent edge server with versatile I/O, 3 expandable PCIe slots, supporting AI inferencing

PE1000N

Arm System, NVIDIA Jetson, LPDDR4, eMMC, USB3, Dual LAN, HDMI, M.2 E, M.2 M, mini PCIe, AEM, Dual SIM, 12-24V

PE1100N

Arm System, NVIDIA Jetson™ Orin™, LPDDR4, eMMC, USB3, Dual LAN, HDMI, M.2 E, M.2 B, M.2 M, AEM, Dual SIM, 12-24V

PE3000G

Rugged fanless edge AI computer supporting NVIDIA® or Intel® MXM GPU and 12th Gen Intel® Core™ Processor

PE4000G

14th / 13th / 12th Gen Intel® Core™ rugged edge GPU computer supports up to 200 W GPU and versatile expansion capabilities

PE6000G

Rugged edge AI GPU computer supporting up to 450W GPU card and 14th/ 13th/ 12th Gen Intel® Core™ Processor

PE8000G

Rugged edge AI GPU computer supporting up to dual 450W GPU card with 14th /13th/ 12th Gen Intel® Core™ Processor embedded

Fanless Embedded Computers

PE200S

Intel®Atom® X Series Processor Intelligent Edge Computer with mini PCIe slot,DDR3L 1866MHz, DP, HDMI, Dual-LAN, Multiple COM, 12-24V DC

PE200U

Intel® Core™ i7/i5/i3 Processor Intelligent Edge Computer with mini PCIe slot,DDR4 2400MHz, DP, HDMI, Dual-LAN, Multiple COM, 12-24V DC

PE1000S

Intel®Atom® X Series Processor Intelligent Edge Computer with mini PCIe slot,DDR3L 1866MHz, DP, HDMI, Dual-LAN, Multiple COM, 12-24V DC

PE2000S

Intel® Core™ i7/i5/i3 Processor Intelligent Edge Computer with mini PCIe slot,DDR4 2400MHz, DP, HDMI, Dual-LAN, Multiple COM, 12-24V DC

PE2000U

Intel®Atom® X Series Processor Intelligent Edge Computer with mini PCIe slot,DDR3L 1866MHz, DP, HDMI, Dual-LAN, Multiple COM, 12-24V DC

PE2100U

Intel® 13th Gen. Core™-I Processors Intelligent Edge computer with various connectivity options, dual channel DDR5, multiple LAN, four COM, six USB, 9-36V DC

PE5100D

Rugged High Performance and Fanless Edge Computer Supports Intel® 14th/ 13th/ 12th Gen Core™ i CPU, 2.5" Hot-Swappable SSD/HDD Tray, RAID 0/1 and Rich I/O

PE5101D

Rugged High Performance Edge Computer Supports Intel® 14th/ 13th/ 12th Gen Core™ i CPU, 2.5" Hot-Swappable SSD/HDD Tray, RAID 0/1 and up to 200W Graphics Card

Fanless Embedded Computers

Mini PC PL63

Ultraslim and reliable Mini PC powered by 11th Gen Intel® Core™ Processors and Intel Iris® Xe Graphics*, up to 64 GB DDR4 RAM, PCIe® Gen 4 x4 M.2 NVMe® SSD, Intel 2.5 Gb LAN, Thunderbolt™ 4*, WiFi 6

Mini PC PL64

Ultraslim computer with 12th Gen Intel® Core™ Processors, fan-less chassis for 15W CPU, 4K triple-display support, dual LAN, dual COM ports, PCIe® Gen 4 SSD, WiFi 6E, 50°C operational ambient temperature

EBS-S100

Intel Atom® and Processor N-series Fanless Embedded Computer with DDR5, 4K@60hz DP and HDMI, Dual-LAN, Multiple COM, USB3.2, mini PCIe, 9-36V DC

EBS-S300W

Intel® Atom® x6000E Series Fanless Embedded Computer with DDR4, 4K@60hz DP and HDMI, Dual-LAN, Multiple COM, USB3.2, M.2 E/M/B key, 9-36V DC

EBS-P300W

Intel® Atom® x6000E Series Fanless Embedded Computer with LPDDR4x on board, up to 4Kp60 solutions via HDMI X 2, Dual-LAN, Multiple COM, USB3.2, M.2 E key, M.2 B key, 12-24V DC

PN64-E1

Ultra-compact mini PC with 13th Gen Intel® Core™ mobile Processor with Intel® Iris Xe Graphics, supports quad displays and 4K resolution, 2x PCIe® Gen4 x4 M.2 NVMe® SSD, 2.5 Gb LAN, WiFi 6E

Embedded Computers

EBE-4U

Standard 19" rackmount 4U chassis with durable 1.2mm SGCC sheet metal, compatible with ATX, micro ITX and Mini-ITX motherboards, including Intel® H110, Q170 or Q470E chipsets, and 300W or 500W IPC PSU, for improved security, compatibility and adaptability.

EBE-4UG

Standard 19" rackmount 4U chassis with durable 1.2mm SGCC sheet metal, compatible with ATX, micro ITX and Mini-ITX motherboards, including Intel® H110, Q170 or Q470E chipsets, and 300W or 500W IPC PSU, for improved security, compatibility and adaptability.

EBS-I10

Intel® 9th Generation Core™ i3/i5/i7 performance embedded PC with 2U high compact size.

EBS-A700

Desktop/Wallmount chassis with durable 1.2mm SGCC sheet metal, compatible with ATX, micro ITX motherboards, including Intel® Q470E, H610 or Q670E chipsets, and 500W or 850W IPC PSU, for improved security, compatibility and adaptability.

EB-ITX-B

Intel® 10th Generation Core™ i9/i7/i5/i3 performance and scalable Embedded Box PC with PCIE, USB, Dual-LAN, DP, DVI-D, M.2, Multiple COM.

Arm-based Gateways

PE100A

Intelligent Edge computer with NXP® i.MX 8M low power consumption and scalable Processor

PV100A

NXP i.MX8M chipset embedded in-vehicle edge gateway with one-sided I/O, full-line LED indicator, multiple essential I/O and expansion cable

Networking and Security

The Essential Conduits Through Which All Your Data Flows

Ensuring the smooth operation, reliability, and security of an organisation's IT infrastructure

Switches and routers facilitate seamless connectivity between devices, departments, and locations, allowing employees to access shared resources, collaborate effectively, and communicate efficiently, enhancing productivity and driving business success.

Additionally, it also manages data traffic within the network and enable gateways between the local network and external networks.

Firewalls act as the first line of defense against cyber threats by monitoring and controlling incoming and outgoing network traffic. Firewalls are essential to protect business-critical assets and maintaining regulatory compliance.

Providing the Connectivity, Reliability, and Security Foundation Necessary

DiGiCOR partners with leading networking vendors to provide our customers with network solutions best suited to their needs, covering all types of networking requirements. From small office optimised shared LAN setups to high-performance and highly available data center networking for business-critical operations, DiGiCOR can assist with designing and providing all manner of solutions coupled with the support and maintenance expected of such networks.

AI Data Center Networking

AI is transitioning from engineering lab to boardroom deliverable,

and AI architects and their IT counterparts are suddenly navigating new territories. To realise AI's full value, they must first manage the complexities of AI deployment and deal with the realities of AI costs and lead times Juniper's AI Data Center solution is the fastest and most flexible way to deploy high-performing AI training, inference, and storage clusters, and the simplest to operate with limited IT resources. With unique intent-based operations, an AI-native virtual network assistant, and Juniper-validated designs, Juniper simplifies AI data centre networking design, deployment, and troubleshooting.

Featured Brands

Fortinet is a global leader in cybersecurity solutions, providing a broad range of products and services designed to protect networks, endpoints, applications, and data from cyber threats.

Ubiquiti has gained prominence in the networking industry by offering a wide range of innovative products tailored for consumer and enterprise markets.

Juniper Networks dramatically simplifies network operations and driving super experiences for end users.

Palo Alto Networks is a leading cybersecurity company specialising in advanced solutions like next-generation firewalls, cloud security, and AI-driven threat intelligence to protect organisations against evolving digital threats.

Juniper Apstra

Juniper Apstra is a software-only, multivendor, intent-based networking solution that provides closed-loop automation and assurance to provide a complete fabric management solution.

Juniper Apstra translates business intent and technical objectives to essential policy and device-specific configuration, and it continuously self-validates and resolves issues to assure compliance. You specify the “what” (network topology, VLANs, desired capacity, redundancy requirements, access rules, and more), and Juniper Apstra delivers the “how.”

The Juniper Apstra software is installed as one or a set of virtual machines (VMs) to connect and manage devices via agents installed on or off the devices.

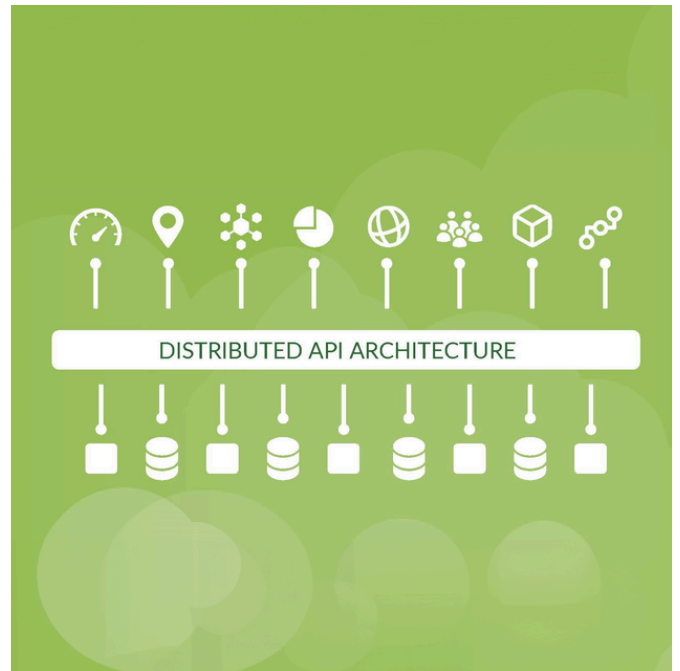

Juniper Mist AI & Cloud

Juniper has brought true innovation to the networking space with the world’s first wired and wireless network.

The Juniper Mist™ Platform makes networking predictable, reliable and measurable with unprecedented visibility into the user experience. Time-consuming manual IT tasks are replaced with proactive automation and self-healing capabilities, lowering networking operational costs and saving substantial time and money.

Juniper also brings enterprise-grade Wi-Fi, Bluetooth® LE and IoT together so businesses can increase the value of their wireless networks through personalised location services, such as wayfinding, proximity notifications, and asset location. With the patented virtual BLE (vBLE) technology, no battery beacons or manual calibration are required. Juniper also extends AI operational efficiency and insights to the wired side of the business, including campus fabrics and SD-WANs.

All operations are managed via the Juniper Mist open and programmable microservices cloud architecture. This delivers maximum scalability and performance while also bringing DevOps agility to wired, wireless, and WAN networking and location services.

Marvis

Mist AI is the foundational element behind Marvis, the industry’s first Virtual Network Assistant, which provides extensive insight and guidance via a natural language conversational interface.

- Understand natural language queries and provide specific answers about the network, such as performance, issues, configuration, and features.
- Proactively identify and resolve the root cause of network problems across wireless, wired, and SD-WAN domains, and validate the effectiveness of the actions taken.
- Streamline customer support by running every Juniper Mist support ticket through Marvis and offering guidance and recommendations to IT staff.
- Provide a client-to-cloud view of the network and correlate events across campus, branch, and data center domains.

UPS

A Reliable Backup Power Source

Safeguards Against Unexpected Power Fluctuations and Outages

An Uninterruptible Power Supply (UPS) system is a vital component for any business, providing a reliable backup power source during outages and power fluctuations. This ensures that critical IT equipment like servers, network gear, and other essential devices remain operational, preventing disruptions that could lead to data loss and damage. UPS systems work by instantly supplying power from their batteries when they detect a loss of power, allowing businesses to continue functioning smoothly and efficiently even during unexpected power interruptions.

The importance of having a UPS system cannot be overstated. Power outages and fluctuations can cause significant damage to electronic devices, potentially leading to hardware failures, loss of valuable data, and prolonged downtime. These disruptions can have severe financial implications, affecting productivity, revenue, and customer trust. By implementing a UPS system, businesses can safeguard their operations, ensuring that critical processes remain uninterrupted and minimizing the risk of data corruption or equipment failure.

From small computer rooms at the network edge to enterprise and hyperscale data centers. Discover the best uninterruptible supplies to protect your application.

Featured Brands

PowerShield offer a complete range of UPS solutions for every application. Their products feature advanced technologies like LiFePO4 batteries and are tailored to meet Australian conditions.

Vertiv™ UPS systems deliver high-efficiency, reliable power protection for critical IT infrastructure, offering advanced features like double conversion technology and intelligent battery health management. They ensure mission-critical applications stay protected from power disturbances and outages.

Online Uninterruptable Power Supplies

Centurion RT Series

As a true online double conversion UPS the Centurion RT is PowerShield's highest single phase power density UPS.

Boasting an output power factor of 0.9, this will fully protect mission critical devices as it can support larger loads than UPS products of an equal VA rating.

The Centurion RT series has an energy saving Advanced ECO mode, which allows the unit to operate at very high efficiency, up to 98%. When the utility mains input voltage is within the ECO range the UPS saves energy by passing the mains supply directly through to the load, while the inverter continues to operate in a passive mode.

Centurion RT LiFePO4 Series

The Centurion LiFePO4 features true online double conversion and a Lithium-iron Phosphate advantage that includes extended battery life, lighter weight, faster recharge, higher performance and higher power density.

Part of PowerShield's highest single phase power density UPS range, this sophisticated series will provide the most comprehensive protection for mission-critical devices such as sensitive networks, computers, servers, telecom applications, as well as industrial applications.

VERTIV.

Online Uninterruptable Power Supplies

Liebert GXE3 Series

The Vertiv™ Liebert® GXE3 UPS is an online double conversion solution which offers power protection in an affordable, efficient system with deployment and operation flexibility.

The high output power factor (0.9) of the Liebert GXE single-phase UPS enables continuous and reliable power to more connected devices, protecting them against many disturbances in the AC mains with the online double conversion technology and the input surge protection.

The high efficiency in both line and ECO modes of operation for this already affordable UPS also drives energy and operational costs savings. Available in 1, 1.5, 2 and 3KVA power ratings in either a compact tower form factor, or in a rack/tower form factor with flexibility for mounting in either tower position or inside a rack cabinet together with the IT equipment critical for any application.

Liebert GXT5 Li-Ion Series

The Vertiv Liebert GXT5 single phase UPS operates with high power efficiency, making it ideally suited to protect critical infrastructure in both centralised and edge network applications.

Scalable runtime options with matching external battery cabinets offer additional flexibility when extended uninterrupted power is required. Plus, the Liebert® GXT5 provides battery health status and replacement date prediction for intelligent battery health management.

The UPS system is easy to deploy and maintain due to its user-friendly LCD interface and remote management capabilities supported by the Vertiv™ RDU101 communications card which makes the Liebert GXT5 compatible with infrastructure management solutions such as Vertiv™ LIFE Services, environmental sensors, Vertiv™ Power Insight, and more.

Liebert GXT5 Series

The Vertiv™ Liebert GXT5 Lithium-Ion double conversion online UPS provides both the highest level of power conditioning and battery backup for business critical IT equipment such as business network gear and servers ensuring your mission-critical applications are protected in the event of an unanticipated loss of power or an unprecedented power surge.

The GXT5 Lithium-Ion UPS protects against the widest range of power fluctuations and automatically switches to battery backup when power loss is detected. With a 0.9 or better output power factor (PF) and no transfer time to operation on battery, you can ensure your most critical assets are protected.

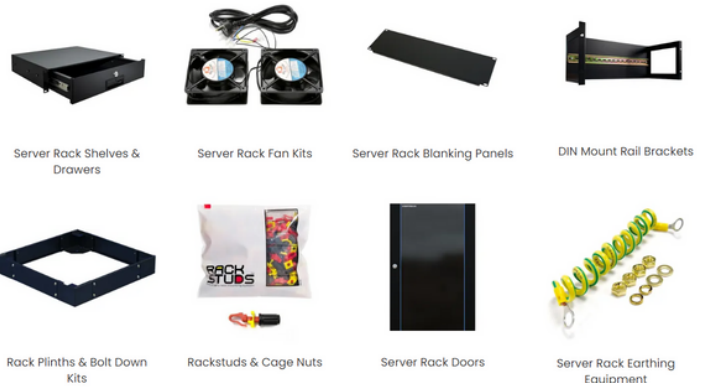

Racks & Accessories

Efficiently Organise IT Equipment with Racks and Accessories

Integrates Essential Accessories for Better Functionality

Server racks are essential for organising and housing IT equipment such as servers, routers, and switches. These racks provide a structured and efficient way to manage critical hardware, ensuring proper airflow and cooling to prevent overheating. They also offer physical security, cable management, and easy accessibility for maintenance and upgrades, making them crucial in both data centers and smaller network setups. With various sizes and configurations available, server racks can be tailored to meet the specific needs of any business, optimizing space and enhancing operational efficiency.

Server Rack Shelves & Drawers

Server Rack Fan Kits

Server Rack Blanking Panels

DIN Mount Rail Brackets

Rack Plinths & Bolt Down Kits

Rackstuds & Cage Nuts

Server Rack Doors

Server Rack Earthing Equipment

Featured Brands

Certech offers a wide range of server racks and accessories designed to meet various business needs. Their server racks provide robust solutions for organizing and protecting IT equipment. Additionally, Certech's accessories, such as drawers and shelves, enhance storage capabilities and ensure efficient cable management within server and data cabinets.

Vertiv's server racks offer robust and versatile solutions for organizing and securing IT equipment, ensuring efficient airflow and easy access for maintenance. They are designed to support various configurations, optimizing space and enhancing operational efficiency in data centers and network setups.

Server Racks

VE Rack

The Vertiv VE Rack is an innovative enclosure system that integrates your computing hardware, power management technologies and peripherals in data centers and computer rooms. It offers superior design and flexibility, allowing optimal data center performance and easy installation. The Vertiv VE Series Rack provides cooling, power distribution, cable management, and environmental monitoring infrastructure for application in IT environment.

- Perforated doors for optimal air flow up to 75%
- Tool-less mounting slots for vertical PDUs
- Loading capacity of up to 1600 kgs

Vertiv VE rack is the ultimate solution designed and engineered for demanding data centre environment. To achieve optimum versatility within the server rack, users can set multiple depths throughout the rack by adjustable 19-inch mounting rails mounted on heavy duty side supports.

Horizontally divided side panels provide ease of access and convenient post-installation maintenance. Over 75% perforations on front and rear door enable optimum air flow within the rack. Flat-pack option enables savings up to 60% in the transport cost and warehouse space.

SmartCabinet

Introducing the Vertiv™ SmartCabinet™ range, a pre-configured, self-contained solution that offers the efficiency, economy, interoperability, and control to implement an exceptional infrastructure strategy.

- Economical - Reduces implementation costs compared to conventional solutions.
- Simplified - Maximise use of existing infrastructure and gets up-and-running in a matter of weeks.
- Controllable - Enforce add/change policies, speeds IT administration request response times significantly.

With the technological emergence in today's dynamic era, the Edge infrastructure plays prime importance for the future growth. All the concerns in the equipment rooms need a streamlined solution in a well-planned ecosystem for easy upkeep with a low carbon and compact footprint. Thus, the intelligent deployment solution helps in reducing the space with a faster turnaround time eliminating human error and equipment failures.

Therefore, it becomes extremely important for IT infrastructure solution to live up to the dynamic needs of today's business goals. Hence, the need to deploy a compact edge solution is required, which limits the in-house technical expertise and eliminate the space constraints. Vertiv introduces the next generation powerful Edge solution in low carbon footprint.

Server Racks and Accessories

Server Racks

Premier Series Server Racks

CERTECH's Premier series racks range from 12RU to 45RU, with various widths and depths. They feature a drop-down 4x fan tray, which is brilliant when a fan needs to be replaced, as only four bolts need to be unfastened to remove the tray. With the added bonus of dust filters, your equipment will last longer, as will the whisper quiet ball bearing fans installed on each CERTECH cabinet.

Rear bi-fold doors (to save opening space) and Australian-approved glass front door, compliment the rigid construction Supplied with castor wheels, as well as levelling feet and a 6-way power rail. The difference is noticeable.

Rack Accessories

When it comes to rack and cabinet accompaniments CERTECH has you covered.

When you need an additional drawer for storage or shelves for your network equipment in your server and data cabinets, we have a great range to choose from. When it comes to securing and installing your rack with data equipment CERTECH has a great selection of Rackstuds and cage nuts. Fill that unused space in your server rack and data cabinets to control the airflow with a CERTECH easy-to-install blanking panel. If you need a replacement fan kit, door or a way to secure your cabinets with plinths and bolt-down kits have a look at our rack accessories.

Licensing

Ensuring Compliance and Cost-Effectiveness

Legally Access and Utilise Essential Software Applications that Drive Productivity

These licenses provide businesses with the legal right to use software products while ensuring compliance with copyright laws and intellectual property regulations. Additionally, software licenses often come with support, updates, and maintenance services. These ensure that businesses have access to the latest features, security patches, and technical assistance to maximise the value of their investment

Software licenses enable businesses to scale their operations according to their evolving needs, allowing them to purchase additional licenses as their workforce grows or as they expand into new markets and territories. By acquiring the appropriate licenses,

businesses can access a wide range of software solutions tailored to their specific industry, workflow, and requirements, enabling them to streamline processes, automate tasks, and stay competitive in a rapidly changing business landscape. Furthermore, software licenses help businesses mitigate the risks associated with using unauthorised or pirated software, protecting them from potential legal liabilities, security vulnerabilities, and operational disruptions.

Featured Brands

Adobe Creative Cloud grants users access to a comprehensive suite of professional design, video editing, and web development software.

Arcserve ensures comprehensive data security and availability, tailored to businesses' data protection and disaster recovery needs.

Permission to use Microsoft products such as Windows, Office productivity suites, and server solutions, tailored to different user needs.

Enables organisations to protect their data and ensure business continuity through Veeam's comprehensive backup, recovery, and data management solutions.

VEEAM Licensing

Data Platform

Veeam Data Platform is a software solution that provides data protection and management for various workloads, apps and data across different environments, such as cloud, virtual, physical, SaaS and Kubernetes.

Data Security

Multi-layered protection designed for peace of mind across the hybrid cloud

Data Recovery

Fast, reliable recovery when you need it, where you need it

Data Freedom

Protect all your data, anywhere, any way, with zero lock-in

Veeam and TrueNAS

Since 2017, TrueNAS has been certified with Veeam. Now, TrueNAS R-series, X-series, and M-series hardware are certified with version 12 for VMware certification tests.

Using TrueNAS as your Veeam target provides an enterprise storage array with all the features and performance of other alternatives, at less than half their price. You can utilise Veeam’s direct SAN Access transport mode to connect to the TrueNAS enterprise storage array using iSCSI to keep backup data on an enterprise storage array instead of relying upon a server with local storage.

Customers using Veeam with TrueNAS gain the TrueNAS benefits of hypervisor support and a wide variety of storage services, protocols, modular hardware components, high speed read and write caching, superior performance, painless capacity scaling, ease of management, and low cost per gigabyte. TrueNAS is the world’s leading Open Source software-defined storage operating system, and used OpenZFS which provides a self-healing file susyem for backup storage, ensuring that Veeam’s backup data stays pristine and secure.

Running Veeam Backup and Replication with TrueNAS lets administrators significantly improve their data transfer throughput, and reduce the amount of time spent on backing up each VM.

TrueNAS VEEAM Certified Lineup

TrueNAS M-Series, TrueNAS X-Series, TrueNAS R-Series

Benefits of using TrueNAS with Veeam

- Supports Veeam’s Direct SAN/NAS Access transport mode (certified) as well as Object Backup using Minio
- World’s number one Open Source software-defined storage solution (formerly known as FreeNAS)
- Uses OpenZFS to guarantee integrity of backups
- Performance-oriented design provides maximum throughput/IOPS and minimises latency of backups
- Maximises backup solution ROI via HDD/SSD technology and inline data reduction
- Perfectly suited for backing up file sharing, virtualisation, OLTP, HPC, and M&E applications
- Supports commercial and Open Source hypervisors
